Version	Date	Summary of Changes	By
1.0	3/5/2021	Initial Draft	Joanne Brainard, Kirk NordenFelt

Outstanding Questions

Name	Date	Reason For Changes

Approvals

Approval Name	Approval Date	Comments

1. Invoice Management (Fee Tracker View and Update Invoice)

- No changes to be made to the existing code present for Phase 1 – Title Invoice

Invoice Screen -
FRD.docx

- Title Utilities for the title repository will feed title fees and client closing fees
 - Fees – First Mortgage Division
 - Title Production System will feed any endorsements that we have identified that will overrule the client setup
 - Property types: PUD, Man Homes, Condos and Loan type
 - Data Mapping Rules present (ClosingConfig-Endorsements)
 - Fees – Home Equity Division
 - Generate State Specific Fees
- Recording Fees - Exos RFC (Recording Fee Calculator) will feed the recording fees.
 - Generate Recording Fees Estimate

1.1 First Mortgage Division

- Any fee that is added/edited/deleted on the invoice will feed into the CD (Closing Disclosure)
- Once an update is received from RFC, recording fees should not be added to the invoice after signed documents are received.
- User will need the ability to see the invoice stored as a document on the order (UI Design)
- Tracking Data – Account for added/edited/deleted records.
- First Mortgage Rules:

	Fee Description	Allow amount Edit
1.	Endorsements	No
2.	Deed/doc prep fee	Yes
3.	Doc prep fee	Yes
4.	Borrower CPL fee	No
5.	Lender CPL fee	No
6.	Payoff obtained	Yes
7.	Advance demand/Subordination fee	Yes
8.	Title Curative fee	Yes

- Roles/Permissions:
 - Users with special permissions (manager list) will be able to add/edit/delete records on the invoice.
 - Users without permissions will not be able to edit/delete endorsements that are transactional or populated from client set up rule.
 - Users without permissions will have the ability to add/delete optional Endorsements
 - List of Optional Endorsements to be placed here. (Discuss with Laura/Brenda – UI behavior)

- Users without permissions cannot delete the lender policy for a refinance transaction on an order.

1.2 Home Equity Division

- User will need the ability to see the invoice stored as a document on the order (UI Design)
- User will need the ability to upload the below to Oracle (UI Design)
 - Individual fees or all fees on the Invoice
 - This should also be accounted for automated workflow
- User will need the ability to reverse the below to Oracle (UI Design)
 - Individual fees or all fees on the Invoice
 - This should also be accounted for automated workflow
- Only One Invoice is present on an order
- Tracking Data – Account for added/edited/deleted records.
- Home Equity Division will have a specific list of fees to pick up that will be manually added on the Invoice.
 - Exception: If there is an Escrow and a Full Insured Title Product, the fees that can be added/edited/deleted will follow First Mortgage Rules.

1.3 Invoice Trigger

- Orders that have title and escrow products
 - Trigger point for Invoice to be generated -> Status: QC Complete
- Orders that do not have a title product (specific to Home Equity)
 - Closing with Doc Signing Only Product – Trigger Invoice once ‘Doc Signing Complete’
 - Fees will be auto-added to the Invoice PDF and the Invoice PDF will be attached to the doc signing escrow product.
 - Filing Only – Trigger Invoice on a filing only order when user saves the documents in the RFC
 - Generate Invoice PDF on ‘Recording Complete’ that will need to be attached to the product.
 - Specific Clients: Need an option to generate Invoice on ‘Signing Scheduled’
- Endorsement Variances
 - List of Endorsement variances should populate only for the order applicable to the specific state.
 - Search Functionality – acronyms/keywords like PUD, Mobile or Man, Condo to be allowed
 - If user searches for an endorsement, the endorsement variance should pop up in the list results not the endorsement. Example: If user types ALTA 8.1 for NY, the list result should not show ALTA 8.1 but TIRSA 8.1 EPL
